

AREVA Methanol Injection Technology to Reduce IGSCC in BWR Plants

Increase asset protection and extend asset life by lowering investment costs.

Methanol extends IGSCC protection to all moisture-affected locations, including virtually all vessel internals.

Current Technology

New AREVA Innovation

Features

- Liquid form
- Protects all wetted surfaces
- Easy addition to your current chemistry program
- Low cost
- Protection
 - During startup
 - During shutdown
 - When HWC is offline

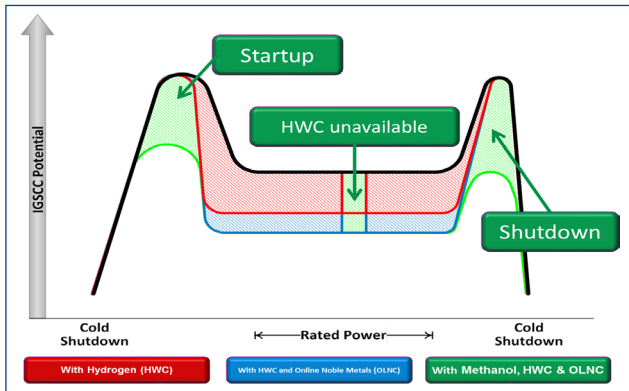

Benefits

- IGSCC protection when crack initiation and growth rates are the highest!
- Allows full cycle protection
- Projected reduction in frequency of vessel internals inspections
- Projected reduction in the number of repairs/replacements
- Projected reduction in the number of evaluations/JCO's from new findings
- Projected dose reductions

More Innovative Outage Solutions

- RCP pumps and motor shop services
- Engineering and analysis
- Chemistry lab services
- PWR & BWR refueling services
- Safety-related machining and coatings
- Outage management and OCC support

When does methanol protect?

*Where does methanol add protection?

*BWRVIP-167NP Revision 3: "BWR Vessel and Internals Project Boiling Water Reactor Issue Management Tables", Appendix B
